

GRAPECITY SOFTWARE SERVICES

SERVICES PROFILE

The best software ideas can languish on the shelf or fail during development due to numerous problems. GrapeCity understands the pitfalls that exist in successfully executing a software project. We also bring senior-level critical thinking, substantial depth of knowledge, and a thorough understanding of our client's business to catapult their next software initiative into the market.

GrapeCity has assembled teams of highly knowledgeable and experienced software professionals and we take pride in being able to offer our clients this valued intellectual capital. We consistently bring a collaborative approach, personalized service, strategic thinking, and a commitment to quality and high ethical standards to our clients and business partners.

Why GrapeCity Software Services

With more than 25 years of extensive experience and a staff of nearly 100% Microsoft and Java certified professionals, GrapeCity has developed award-winning e-commerce, financial, distribution, sales, process and utility solutions.

We are proud to be one of the preferred service providers for Microsoft Consulting Services in China, having built solutions for Microsoft and some of its prestigious customers. GrapeCity has been an early adopter of Microsoft .NET, Component Technology, BizTalk Server, Information Bridge Framework, .NET Compact Framework, and Information Worker technologies. We also continue to work closely with Microsoft to incorporate the next generation Windows Vista and Office 12 technologies into our solutions.

For companies looking to launch their next software product into the market, GrapeCity has first-hand experience having successfully taken our own best-selling software products into the marketplace. Our ERP software for the education industry in Japan, LeySer, dominates the highly demanding Japanese market with more than 70% of the market share. We also have our own best-selling suite of powerful software components which is marketed and sold in Japan and used by thousands of software developers in developing .NET-based Web and Windows applications.

With our deep and varied expertise, we help our clients make intelligent choices regarding adoption of new technologies and suggest strategies that make the most sense for their specific needs.

Technology Capabilities

The underlying Microsoft technologies that power our solutions have evolved from the early days of Windows with client-server development using Visual Studio/MTS/ASP/COM and then having moved to the .NET (WinForms and ASP.NET) set of technologies and servers. We have created award-winning solutions using SQL Server, Commerce Server, BizTalk Server for corporations such as Sony in China.

GRAPECITY SOFTWARE SERVICES

Our Java teams are experienced in enterprise technologies such as DB2, Oracle and IBM Websphere. We have successfully developed components, business applications, and productivity tools for mid-size and large customers.

Our Mobile and Wireless teams focus on Microsoft Windows Mobile and Symbian platforms to provide product development services on the two largest emerging smartphone platforms in the world. GrapeCity has experience in building award-winning education and productivity tools, games, and system and handset security software.

Software Development

By combining our deep technical expertise with product management and program management skills, GrapeCity applies its success-oriented approach to help organizations with their software development road-map—inception, research and development, quality assurance and testing, deployment, and ongoing support—to ensure successful product releases.

Our teams practice an agile mix of an iterative software development approach and top-down product planning practices, supported by rapid prototyping, to ensure that our client's vision is successfully translated into working software, while mitigating risks and focusing at all times on their business goals.

If clients are considering having their own offshore subsidiary, GrapeCity can help in the transition by setting up a GrapeCity managed Offshore Development Center (ODC) as the first step.

About GrapeCity USA
